

## CubCrafters' 3rd Annual Open House Showcases Launch of New Light Airplane

CubCrafters, is proud to announce their 3rd Annual Open house to be held September 22, 2007. The local manufacturer offers two all new, FAA-certified, ready to fly, aircraft: the second generation SPORT CUB S2, the follow on airplane to the original SPORT CUB: the long awaited redesign of the classic airplane that inspired the light sport category; and TOP CUB, the most capable two-place personal and utility aircraft. In early 2007, CubCrafters was issued only the second FAA 'production certificate' in the state of Washington, and is now the only U.S. aircraft manufacturer producing and delivering both standard and LSA category aircraft under an FAA-approved quality assurance program.

Steady demand for the light planes has shown an increase from 20 employees a few years ago, to around 100 currently, and shows no signs of slowing down. CubCrafters' President and CEO Todd Simmons comments, "With such a special group of employees, products and customers, we will not only maintain that high standard as we go forward, but we are going to accelerate the development of both evolutionary and revolutionary new aircraft, new aircraft products and enhanced aircraft support services." In 2007, CubCrafters will produce a combined-model total of nearly 100 new aircraft.
